Control Panels PANEL GUIDE GLOSSARY

AAV: Audio Alarm Verification, also known as two-way voice to the central station. The LYNX Plus and LYNX Touch control systems have this feature built-in if using the phone line. For two-way voice, use the appropriate GSM or CDMA radio. Other panels can be used with an AVS. The control panel will trigger this module upon kiss off from the central station receiver and microphones and speakers connected to the AVS board will allow a two-way voice dialog between the central station operator and the protected premises.

Addressable Devices: Any module that connects to the panel's ECP (keypad) bus requires a specific address which identifies this device to the control. Devices are either addressed via dip switches, software, or have fixed addresses. These devices include keypads, expansion modules, wireless receivers and transmitter modules, telephone modules, and some AlarmNet® radio transmitters.

Alarm Cancel Verification: In the event of a false alarm, after the user enters their code + OFF, "Cancelled Alarm" is displayed on an alpha keypad confirming the alarm has been cancelled at the central station. "CA" will be displayed on a fixed English keypad.

Audible Exit Warning: When the system is armed in the Away or Maximum mode, the keypads will sound a warning of slow beeps and change to fast beeps for the last 5 or 10 seconds. The VISTA-15P and VISTA-20P have a feature where the system can be programmed to display the exit time remaining in intervals of 1-5 seconds.

AUI: Advanced-user interface, also known as a touchscreen or graphic keypad. Examples are the 6280 and TUXWIFIS/TUXWIFIW.

Auto Stay: If the user arms the system in the Away mode but does not exit before the exit delay expires, the system will arm in the Stay mode.

AVS (Audio Verification System): Provides central station two-way voice capability (AAV) by allowing the central station operator to listen and/or talk to individuals on premises following receipt of an alarm report from the premises' alarm system (excluding fire or carbon monoxide alarms).

Cross Zoning: For use in false alarm prone areas, two zones may be linked together so that an alarm will occur only if both zones trip within a specific time period.

ECP: Enhanced Console Protocol, or another term for the keypad bus. See Addressable Devices.

Event Log: System events can be stored for later retrieval. Some panels allow retrieval at an alpha keypad or graphic one, others require connection with the Compass downloading software.

Exit Delay Reset: After arming Away and exiting, if the user reenters before the expiration of the exit delay, the exit delay is reset.

Exit Delay Restart: Also called quick exit. If the system is armed in the Stay mode, this allows the user to restart the exit and entry delay by pressing the * key.

Exit Error Logic/Exit Alarm: Alerts the user and allows for correction in the event the exit door is left open. Sends a unique report to the central station.

Expansion: Using hardwired V-Plex® RF and/or wireless devices.

H/W Zones Built-in: The number of standard hardwired zones included with the panel.

Keyfob Zones: Wireless keys that can be programmed in certain panels without taking away from the number of maximum protection zones in the panel.

Keypad Macros: Allows a shortcut to simplify various system commands.

LRR Output and Dynamic Signaling: The panel can support AlarmNet radios connected to the ECP (keypad) bus. This allows for extremely simple connections and programming for reporting to the central station. The radios will transmit all messages programmed to go to the primary telephone number. Dynamic Signaling allows you to assign which method of transmission will have priority and how long to wait before transmitting on the other medium. For example, if the dialer has priority and is acknowledged before the programmed delay expires, then the message will not need to be sent using the radio. If for some reason the dialer message is not acknowledged by the end of the delay period, the message will be transmitted via the radio.

Max Zones: The maximum number of total zones supported by the panel.

Night-Stay Mode: Designates certain interior zones to remain active while others are bypassed.

Control Panels | PANEL GUIDE GLOSSARY

Panic Keys: Keypad panic zones in addition to standard zones.

Partitions: Some control panels have the ability to be programmed for multiple partitions, which allows the single control to protect different areas as if each area had its own control.

Programmable Function Keys: The A-B-C-D keys on certain panels can be individually programmed to perform any of the following functions:

- Panic zone
- Single button paging
- Display date and time (returns to normal display after 30 seconds)
- Arm away, stay, or night-stay
- Step arming (cycles once from stay, to night-stay, to away)
- Output device activation
- Communication test
- Macro (shortcut)

Programmable outputs: Relays, V-Plex® or on-board triggers that can be used to activate LED's, strobes, additional sounders, lights, garage doors, etc. Depending on the control panel selected, the outputs can be controlled by system events or by schedules or both.

Programmable Zone Types: Unique zone types may be added for various custom responses. Configurable options include response to entry/exit delays, response to opens and shorts, sounding, fault and dialer delays, and unique contact ID codes.

Schedules: Schedules can be used to turn output devices on and off, to limit the access of certain user codes, automatically arm or disarm the system, or other similar functions.

SIA Compliant: (Security Industry Association) A unified false alarm reduction standard. SIA-ready control panels are pre-programmed to meet SIA false-alarm reduction standards, but those options are not fixed.

Telephone Line Fault Monitor: The system constantly monitors the phone line for proper voltage. Upon a phone line failure, the panel can be programmed to either display this condition at the keypads, display and sound a trouble at the keypads, or display, sound, and cause an output to activate (strobe light, siren, backup transmission device, etc).

Telephone Module: Allows a local or remote touch-tone telephone to act as a keypad. LYNX Plus has this feature built-in.

V-Plex: Also known as the polling loop or multiplexing. It is a method of zone expansion that provides power and data on the same pair of wires. See Expansion.
